SUMMARY

Software engineering graduate specialized in frontend development with React and TypeScript. Built and shipped responsive web applications end to end — from component architecture and UI implementation to backend integration with Firebase and Supabase. Strong analytical foundation in Python and data tooling; fluent English (C1) and collaborative, Scrum-based work style.

SKILLS

Frontend	JavaScript, TypeScript, React, HTML, CSS, responsive design, SwiftUI
Backend & Data	Python, MySQL, Firebase, Supabase, REST APIs, Power BI
Tools & Practices	Git, Scrum methodology, Agile development
Languages	Spanish (native), English (C1)

PROJECTS

Flores Travel Agency	React · Firebase
- Built a travel-agency single-page application in React for browsing destinations and managing bookings. - Integrated a Firebase backend with a localStorage fallback that keeps the app fully functional offline during development.	
Graphic Design Student Portfolio	React
- Designed and built a portfolio website presenting a graphic design student's work in a clean visual showcase. - Owned the front-end architecture and responsive UI, adapting layouts seamlessly from desktop to mobile.	
Inventory Management System	React · Supabase · Custom API
Developed a real-time inventory system handling product registration and live tracking of refrigerator contents, backed by Supabase and a custom API.	
Warranty Claims Fraud Model	Python · Machine Learning
Built an ML pipeline that flags invalid vehicle warranty claims with a cost-tuned decision threshold — catches 63% of invalid claims while reviewing only 27% of volume, cutting estimated costs by 67%.	

EXPERIENCE

Solution Engineer — WaveTech Innovations	Jan 2026 – Jun 2026 · New York, NY (Remote)
- Co-developed a custom CRM portal for project management with the software development team, using React, TypeScript, and Supabase. - Implemented responsive UI components and integrated real-time data workflows against the Supabase backend, collaborating remotely across teams.	
IT Assistant (Internship) — Carnes Victoria	Jul 2024 – Dec 2024 · Tampico, Mexico
- Built Python and SQL scripts to automate server backups and directory creation, improving reliability and reducing manual effort by 20%. - Created and processed B2B sales orders in the company ERP from entry to billing, coordinating with Logistics and Finance to meet deliveries with accurate pricing, taxes, and inventory allocation.	

EDUCATION

UEST Anáhuac — Software Engineering	Aug 2021 – Dec 2025 · Tampico, Mexico
- Processed CSV datasets in Python to build predictive models using linear and multiple regression techniques. - Built iOS user interfaces and application logic in SwiftUI; modeled data dimensions in Power BI from CSV imports.
